ABOUT ME

I started my career in human resources, where I learned that good work begins with understanding people and what they really need. Today I build AI tools at Medrick Game Studio that my colleagues use every day: an assistant that answers players' questions, a dashboard that shows what users are saying and how the market is moving, and a bot that finds new partners for the studio. I didn't know how to code when I started — I learned it by building these tools. I enjoy work where I get to deal with people and also make something that is genuinely useful.

EXPERIENCE

Oct 2025 — now

AI Product Development

Medrick Game Studio · Tehran

Building and deploying the studio's internal AI products — from product definition and architecture through implementation and release — alongside coordination across teams.

- **Support assistant (RAG):** a Persian-language bot answering players of six mobile games. It answers from each game's knowledge base, files tickets, and hands the conversation to a human operator whenever it should. It now **handles about 90% of replies on its own**. Trilingual admin panel for the support team. **363 unit tests, 45 endpoints.**
- **Review & market analysis:** a dashboard that collects and analyses our users' reviews and our competitors' from Cafe Bazaar, Google Play and Myket. The output goes to the studio director's desk, so it was designed to be **decidable** rather than a long report.
- **Studio hunter:** a bot that finds game studios, scores them against a commercial bar, and sends the first partnership email. **It does the work of a full-time person**, and no email is ever sent without human approval — each lead arrives as an approval card in Telegram.

`Python` `FastAPI` `Django` `Next.js` `TypeScript` `PostgreSQL` `Redis` `Qdrant` `n8n` `Docker` `Kubernetes`

Jul — Sep 2025

Human Resources

Medrick Game Studio · Tehran

Recruitment and HR processes. After three months I moved to the product side.

Mar — Jun 2025

Human Resources Intern

Penco · Tehran

CV screening, interview scheduling, assessment-task preparation, and direct contact with candidates.

2024

Human Resources Intern

Parantez Academy · Tehran

Supported the hiring process; ran a one-day workshop on finding the right job, for the Researchers' Club of Azad University.

2022 — 2023

Service Designer

Harz Design Team · Dammam, Saudi Arabia

Service-experience design for teams.

2017 — 2022

Independent Consultant · Support & Sales

Freelance (2020–2022) · Herminatech, Tehran (2017–2019)

My first serious work with users and customers rather than with systems.

EDUCATION

2023 — now

MBA

Organisational behaviour and human resources · Azad University, Science and Research Branch

2013 — 2017

BSc, Information Technology Engineering

Azad University, South Tehran Branch

SKILLS

Product	Product definition · market and competitor analysis · prioritisation · architecture documents · turning data into decisions
AI	RAG system design · tool calling · input and output guardrails · offline evaluation · token cost tracking
Building	Python · FastAPI · Django · Next.js · TypeScript · PostgreSQL · Redis · Qdrant · Docker · Kubernetes · n8n
People	CV screening · interviewing · talent channels · offer letters · career coaching
Always	Systems thinking · problem solving · relationship building · comfort with ambiguity
Languages	Persian (native) · English (intermediate)

OTHER

- **Global Game Jam 2025** (Persian Game Jammers)**:** built a team out of strangers, managed the project, and we shipped in 48 hours.
- **Cafe management system:** personal project — a Persian web app with customer ordering, a live kitchen display, an admin panel, and inventory that computes the true cost of every order.
- **Introductory coaching course** — 2023
